

Certification of Polishing Rings

Your benefits:

- Transparent performance comparison
- Fact-based selection of suppliers
- No need for your own tedious tests
- For polishing tool manufacturers:
Sound sales arguments

The Certificate for Polishing Rings

Industrial companies often have no reliable information about the service life of their polishing rings. Other performance indicators also often vary considerably between manufacturers. In practice, it is often difficult to obtain this information. Even with process or workpiece changes, the selection of the right polishing rings often involves complex tests.

Menzerna offers independent certification of polishing rings based on process data. The Menzerna certificate guarantees the comparability of different polishing rings. As part of standardized test series, we carry out comparative polishing tests and collect the relevant process data. You benefit from better quality with lower tool costs.

As a tool manufacturer, you also benefit from Menzerna certification: You receive objective and convincing sales arguments or important measurement results for your product development.

Take advantage of our offer and have your polishing tools certified by Menzerna.

Data-based performance comparisons provide industrial companies with a sound basis for making decisions on the polishing rings that are suitable for your process!
