

Determining the service life of buffing wheels and abrasive belts

Your benefits:

- Transparent comparison of polishing wheels and abrasive belt performance
- Savings on consumables
- Higher productivity
- Support in the selection of suppliers

Reducing the cost of sanding and polishing

The service life of polishing wheels and abrasive belts has a significant influence on the cost of sanding and polishing processes. For a given application, the service life of consumables can vary widely between different brands. These differences are reflected in the costs for polishing wheels and sanding belts, and also in productivity because of setup times. However, such differences in performance are not always reflected by the purchase prices of these materials.

Precisely measuring the effective lifespan of polishing wheels and abrasive belts in the course of operations is difficult.

That is why you should take advantage of our offer and have the relative lifespan of polishing wheels and abrasive belts determined precisely. You receive a detailed test report and comprehensive data material from us so that you can make the right purchase decisions.

We reveal potential savings and support you on your way to effective statistical process control.
