Perfection in Polishing.
Made in Germany.
Since 1888.

Menzerna develops and produces polishes for industry and trades, automobile clear coats and gel coat surfaces of premium quality.

NEW: Menzerna Metal Polish 1kg

The universal cleaning and polishing paste for industry and trades

Menzerna Metal Polish in the generous 1kg container is the perfect solution for tradespeople and industrial users when it comes to processing metallic surfaces.

Metal Polish cleans and polishes stainless steel, aluminium, chrome, brass, copper, silver and plastics. The paste is ideal especially wherever machine processing is not possible because of the workpiece geometry. This is the case for example when polishing aluminium wheel rims, brass instruments or finished, installed instruments. With manual application, the gloss expert reveals its full performance when it is applied to the surface with circular movements and the residue is polished with a clean, soft cloth. On larger, smooth surfaces, Menzerna Metal Polish can also be processed by machine with soft polishing wheels.

In addition to fast gloss production, Metal Polish removes deposits, tarnishing and minor signs of use as well as flash rust. The 1kg metal can is handy, robust and cleanly resealable, making it ideal for daily use in the workshop and operations.

Overview of the benefits:

- Suitable for application to all metallic surfaces
- Versatile in application (aluminium wheel rims, musical instruments, cutlery, lamps, instruments, jewellery and much more)
- High yield
- High gloss level
- Suitable for manual and machine application
- Removes scratches, flash rust, metal oxidation, dirt
- Protects against environmental influences and tarnishing

Try Menzerna Metal Polish now!
Available starting on: April 2015
