Date: September 2014

For release: Immediately

“Endless Shine”: The quick detailer for a perfect deep gloss

The new “Endless Shine” quick detailing spray from Menzerna guarantees a perfect deep gloss, perceptibly smoother surfaces and long-lasting protection against environmental influences. The spray can be used after a car wash, after polishing and to remove minor dirt from all coated surfaces. The field of application is varied: Coated surfaces, glass, plastic, rubber, aluminium or copper, “Endless Shine” renews all surfaces quickly and effectively.

After application, water beads off the high-gloss surface entirely and the adhesion of dirt is prevented. This “energiser” is also a good choice for car dealerships whose vehicles have to radiate with a new shine on the sales floor, quickly and easily.

When it comes to gloss and lasting protection, “Endless Shine” is clearly superior to conventional products. It is an important addition to the Menzerna range of polishes. The quick-drying detailing spray does not require the addition of waxes and fillers, and is extremely easy to use: Spray the surface with the high-quality spray head and wipe with a microfibre cloth. “Endless Shine” is available in 500 millilitre containers.

Automechanika: Halle 11.1 / exhibition stand D19

About Menzerna:

Menzerna is Europe’s leading developer and manufacturer of polishing agents for industry and trades. Menzerna products optimise polishing and cleaning processes, making them more economical. Menzerna specialists are always working on even better products and processes. Every fifth of the more than 200 formulations is less than five years old. Customers are supported through a worldwide network of subsidiaries, specialist dealers and application technicians. 125 years of experience, comprehensive formulation know-how and a precise understanding of customer requirements make Menzerna an innovative and reliable premium supplier.
